[Home](#) [Team](#) [Publications](#) [News](#) [Webinars](#) [Contact](#)

Welcome to PRD, a project that researches changing patterns of political participation and democratic representation. At a challenging time for democracies worldwide, PRD aims to contribute new knowledge to strengthen the connection between participation and representation.

Seminar

November 20, 2024

THE HEBREW
UNIVERSITY
OF JERUSALEM

Slides for Jenny's talk in the Hebrew University political science department seminar on "Participation and Representation in the Digital Age: Interim Findings and Visions for the Future," with PRD team members Francisca Castro and Aya Shoshan contributing to the Q&A and discussion. The talk includes presenting a co-authored working paper with Francisca Castro titled "Does Social Mobilization on Contentious Issues Affect Citizens' Evaluations of Political Elites?"

ERC project motivating puzzle:

Trends in Political Participation and Representation in the Digital Age

ERC Project's Theoretical Framework

Repertoires
of participation

Including digital behavior

Subjective
representation

"Political Efficacy"

Mobilizing &
organizing

Focus: Lower status groups

New Integration of Hypotheses

H1:
Communication

versus

H2:
Grievance

Research Design

Contributions

Data: Originally harmonized dataset

Methods: Innovations in analyzing repertoires

Theory and findings: Participation-representation connection

How to Recruit a Research Team?

Raya Even David

Administrative Manager of PRD
Ben-Gurion University, Israel

Dr. Jesper Lindqvist

Postdoctoral Researcher
University of Gothenburg, Sweden

Dr. Aya Shoshan

Postdoctoral Researcher
Ben-Gurion University, Israel

PRD's Core Team

Francisca Castro

Postdoctoral Researcher
Humboldt University of Berlin & ISDC

Johan Lyrvall

PhD Student
University of Catania, Italy

Barak Zur

PhD Student
Tel Aviv University, Israel

Paper #1

Organizing & Democracy

Han, Hahrie, Matthew Baggetta, and Jennifer Oser. 2024. Organizing and democracy: Understanding the possibilities for transformative collective action. *Annual Review of Political Science* 27: 245-62 [doi](#)

Main areas of study

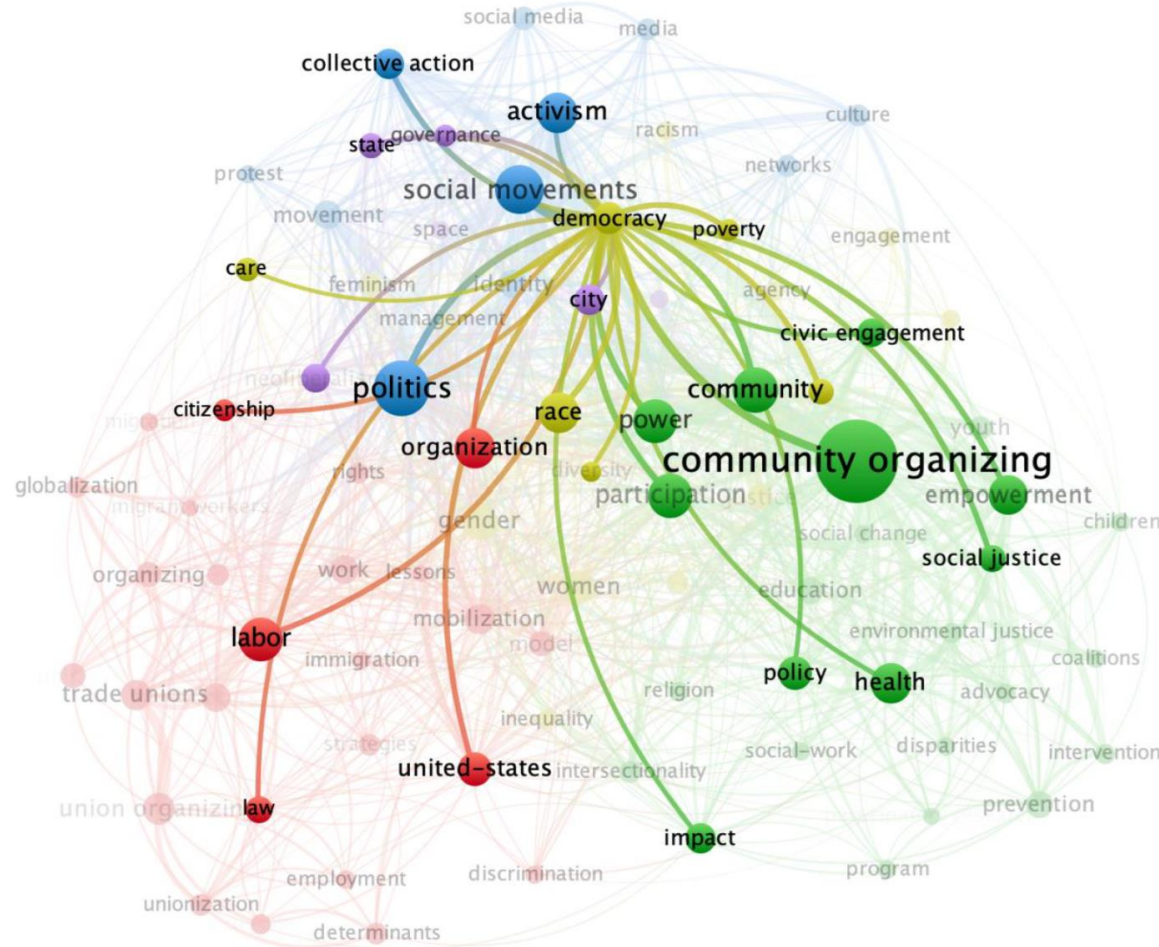

- Industrial relations and labor
- Social movement studies
- Community organizing and community empowerment
- Studies of gender, race, ethnicity, and inequality

Paper #2

Literature Mapping, *PS* article

Figure 3. Democracy in the Terms Co-Occurrence Map.

Shoshan Aya, and Jennifer Oser. In press. Visualizing scientific landscapes: A powerful method for mapping research fields. *PS: Political Science & Politics* [doi](#), (APSA pre-print)

Note: This map, structurally identical to figure 2, visually highlights the keyword “democracy” and its relationship with other keywords.

Paper #3, and related work

Latent class analysis (LCA) methodological articles

Structural
Equation
Modeling
A Multidisciplinary

Lyrvall, Johan, Zsuzsa Bakk, Jennifer Oser, and Roberto Di Mari. 2024. **Bias-adjusted three-step multilevel latent class modeling with covariates**. *Structural Equation Modeling: A Multidisciplinary Journal* 31 (4): 592-603. [doi](#)

Di Mari, Roberto, Johan Lyrvall, Zsuzsa Bakk, Jennifer Oser, and Jouni Kuha. (2024). **multilevLCA: Estimates and Plots Single-Level and Multilevel Latent Class Models**. CRAN, version 1.5.2, published 2024-10-12. <https://CRAN.R-project.org/package=multilevLCA>
9,134 downloads as of Nov. 17, 2024

Lyrvall, Johan, Roberto Di Mari, Zsuzsa Bakk, Jennifer Oser, and Jouni Kuha. (2024). **multilevLCA: An R package for single-level and multilevel latent class analysis with covariates, v2**. arXiv. [doi](#)
R&R requesting light revisions received Nov 14, 2024 to a Q1 journal

Paper #4, and related journal symposium

PS accepted co-edited symposium, "Data Harmonization"

Accepted co-edited symposium proposal:

Kołczyńska, Marta, Sylvia Kritzinger, and Jennifer Oser, eds. Accepted. **"Data harmonization in political science and related fields: Innovations, challenges, and visions for the future."** PS: Political Science & Politics. *[Proposal accepted October 10, 2024]*

PRD proposed article:

Oser, Jennifer, and Barak Zur. "Strategizing About Data Harmonization Visions: The Case of Political Participation."

Additional proposed contributions (selected)

Yue, Hu and Frederick Solt "Wrangling Pre-Harmonized Data"

Lindberg, Staffan I. et al. "DEMSCORE: Solving the Universal Harmonization of Data Across Any Unit of Analysis"

PRD pipeline

Other papers and projects in progress (selected)

- (1) **“Politicians Theories of Protest”** with Jamie Druckman, Lior Sheffer, Devorah Manekin, Tamar Mitts, Jae Yeon Kim, and Elizabeth McKenna
 - Experimental survey design planned to be fielded in the US in December 2024 - comparing theories of protest of politicians, citizens, and civic leaders.

- (2) **“Becoming Architects of Political Change”** with Julia Schulte-Cloos & Hahrie Han
 - Visual conjoint in an online lab experiment approximating social media activity to identify mechanisms for how democratic micropractices may strengthen pro-democratic norms

- (3) **“Meanings of Protest”** with Carolina Plescia and Aya Shoshan
 - Building on Plescia’s ERC “Meanings of Voting” project: literature mapping, interviews, and large-n cross-national survey on ordinary people’s understanding the meanings of protest.

#2: Works in Progress

Work-in-progress #1, under review

Are the Politically Active Better Represented?

Jesper Lindqvist, Jennifer Oser, Ruth Dassonneville, Mikael Persson, and Anders Sundell

Funded by the European Research Council and Riksbankens Jubileumsfond, Sweden

Are the Politically Active Better Represented?

- Dilemma: A democratic principle that all interests ought to be considered equally (Dahl, 1989, 86)
- “Unequal participation: Democracy's unresolved dilemma” – Lijphart (1997)
- Verba and Nie (1972, 2): this question as “perhaps most important of all” - and also “the most difficult to answer.”
- Competing arguments in the literature:
 - “Communication” argument: The politically active get more of the policies they want because of that they communicate their preferences to policy-makers
 - “Grievance” argument: Lack of responsiveness produces grievances, and results in political participation

What's missing?

Systematic, generalizable, cross-national evidence showing whether the politically active are better represented overall.

Research Questions

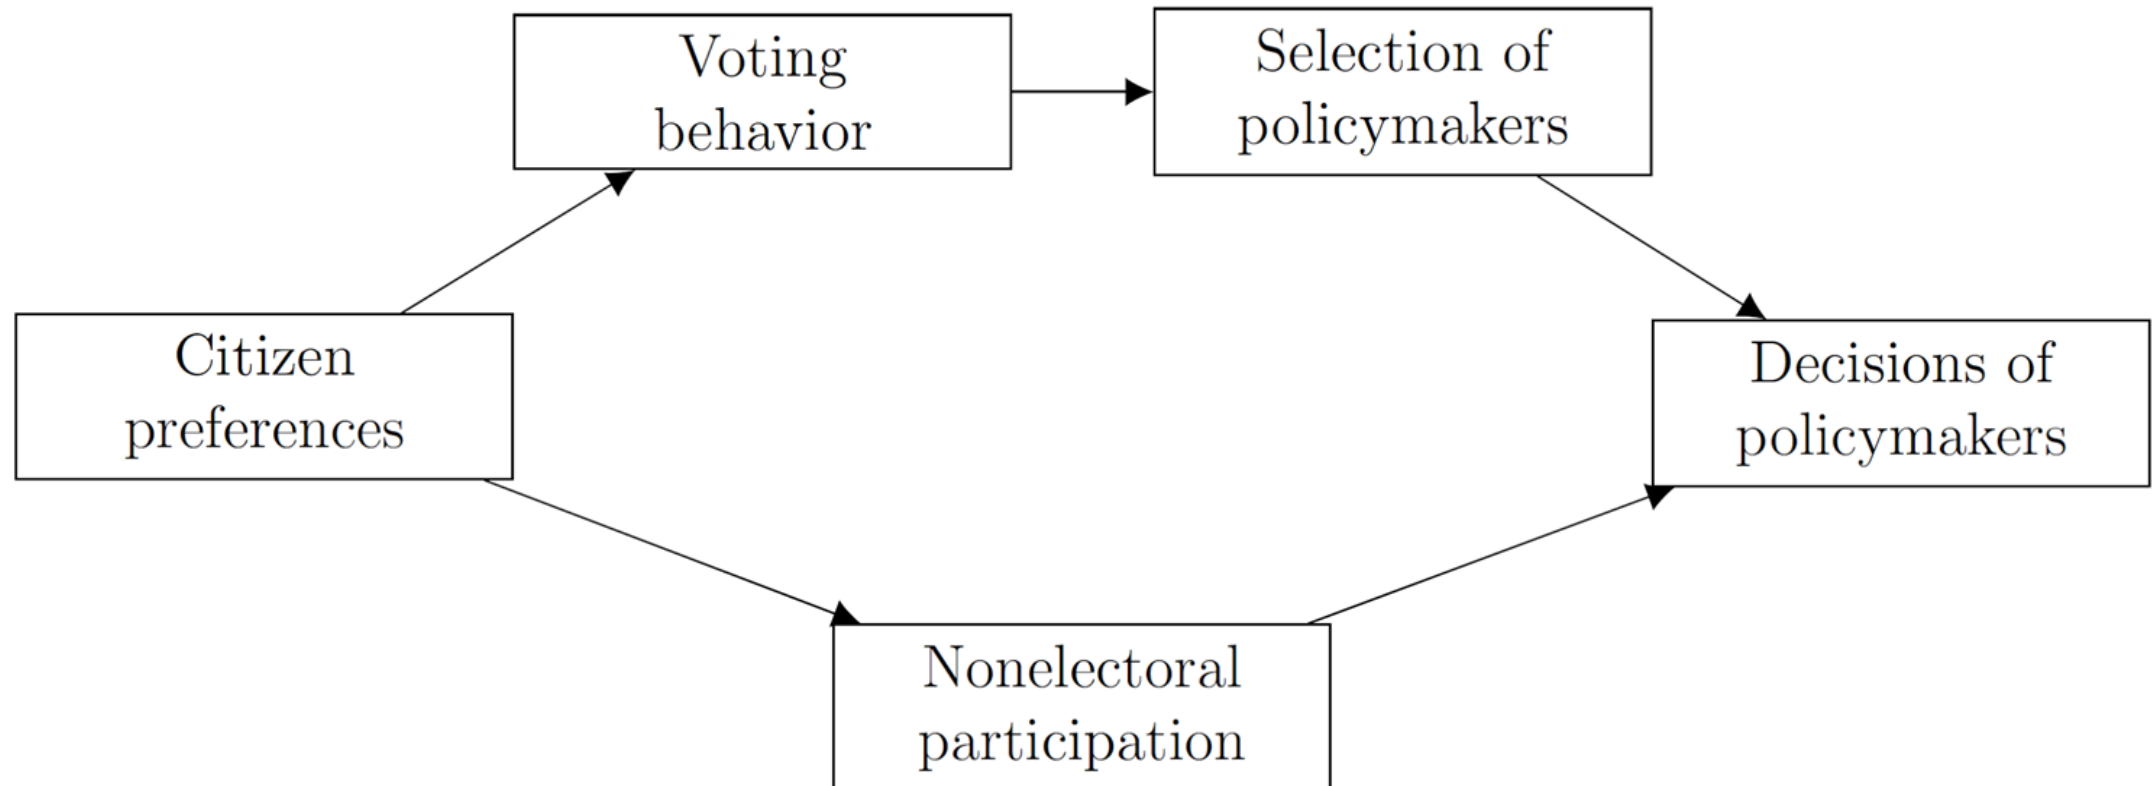

- (1) **Participation-Policy Connection:** Is opinion-policy congruence higher for the politically active?
- (2) **Alternate Causal Explanations:** Can alternative explanations account for a relationship between participation and opinion-policy congruence?

Scholarly ambition:

- Answer the question, “Are the Politically Active Better Represented” with the best available data and methods
- Agenda-setting for future work on causal mechanisms

Main Explanation

Figure 1: Electoral and nonelectoral channels of influence.

Data and Methods

- 40 countries, 20 years, 270,000 respondents
- Individual-level data: ESS (round 1-5, 7, 8), ISSP (1996, 2004, 2014)
- Country-level policy implementation data (Persson & Sundell 2024)
 - Policy topics: civil liberties, economic issues, and immigration/ethnic minority
- Independent variables
 - *Voted*: Voted in the last election
 - *Demonstrated*: Have demonstrated in the last year (or last five years)
 - Robustness test with additional nonelectoral participation indicators
- Dependent variable
 - *Opinion-Policy Congruence*: Congruence between policy support and policy implementation (proportion, 0-1)
- OLS regression with country-survey-year fixed effects

Data and Methods - Contribution

“This is, to our knowledge, the first study that analyzes cross-national data connecting opinions to subsequent policy implementation on multiple policy issues to assess whether those who are politically active have better opinion-policy congruence compared to non-participants”

(p. 2)

Results: RQ1, are Participators Better Represented?

Table 2: The Positive Association Between Demonstrating and Opinion-Policy Congruence Remains When Controlling for Country-Survey-Year Fixed Effects.

	(1)	(2)	(3)	(4)
Voted	-0.015** (0.001)	-0.005 (0.001)	-0.012** (0.001)	0.002 (0.001)
Demonstrated	0.031** (0.002)	0.027** (0.002)	0.013** (0.002)	0.024** (0.001)
Intercept	0.524** (0.001)	0.615** (0.003)	0.575** (0.001)	0.674** (0.003)
Country FE		✓		
Year FE			✓	
Country-Survey-Year FE				✓
N	273,191	273,191	273,191	273,191
R ²	0.002	0.109	0.125	0.391

Note: * $p < .05$; ** $p < .01$. Observations weighted by the number of policy questions answered by each respondent.

Results: Alternative Explanation 1, Socio- Economic Status

Table 3: Socio-Economic Characteristics Explain Part of the Difference Between Demonstrators and Non-Demonstrators, but Does Not Fully Account for the Better Representation of Demonstrators.

	(1)	(2)	(3)	(4)
Voted	0.002* (0.001)	0.001 (0.001)	0.001 (0.001)	0.004* (0.001)
Demonstrated	0.024** (0.001)	0.024** (0.002)	0.015** (0.002)	0.015** (0.002)
Income		0.034** (0.002)		0.013** (0.002)
Tertiary education			0.032** (0.001)	0.034** (0.001)
Woman				-0.005** (0.001)
Age < 30				0.005** (0.002)
Age >= 60				-0.012** (0.001)
Rural				-0.008** (0.001)
Country-Survey-Year FE	✓	✓	✓	✓
N	273,191	200,602	200,340	147,108
R ²	0.391	0.401	0.384	0.390

Note: *p < .05; **p < .01. Observations weighted by the number of policy questions answered by each respondent. When we re-estimate Model 1 with the same sample as in Model 4, the coefficient on Voted is 0.004** and on Demonstrated 0.022**, meaning that the control variables in Model 4 account for about a third of the coefficient for Demonstrated.

Results: Alternative Explanation 2, Political Attitudes

Table 4: Political Attitudes Do Not Explain the Difference Between Demonstrators and Non-Demonstrators.

	(1)	(2)	(3)	(4)	(5)
Voted	0.001 (0.001)	0.003* (0.001)	0.003* (0.002)	-0.002 (0.002)	-0.002 (0.003)
Demonstrated	0.013** (0.002)	0.015** (0.002)	0.015** (0.002)	0.017** (0.003)	0.015** (0.003)
Political interest	0.014** (0.001)				0.009** (0.002)
Political trust		0.007** (0.001)			-0.004 (0.002)
Satisfied with democracy			0.009** (0.001)		0.001 (0.002)
Political efficacy				0.007** (0.002)	0.006** (0.003)
Country-Survey-Year FE	✓	✓	✓	✓	✓
Socio-economic control variables	✓	✓	✓	✓	✓
N	146,351	144,412	136,379	50,524	45,642
R ²	0.391	0.389	0.392	0.451	0.447

Note: * $p < .05$; ** $p < .01$. Observations weighted by the number of policy questions answered by each respondent. Socio-economic control variables include income, tertiary education, woman, age, and rural. When we re-estimate Model 1-4 with the same sample (number of observations) as in Model 5, the coefficients for Voted are (from Model 1 to Model 4) -0.002, -0.0004, -0.001, and -0.001. For Demonstrated, the coefficients are 0.015**, 0.016**, 0.016**, and 0.016**.

Robustness Tests – Additional Nonelectoral Participation

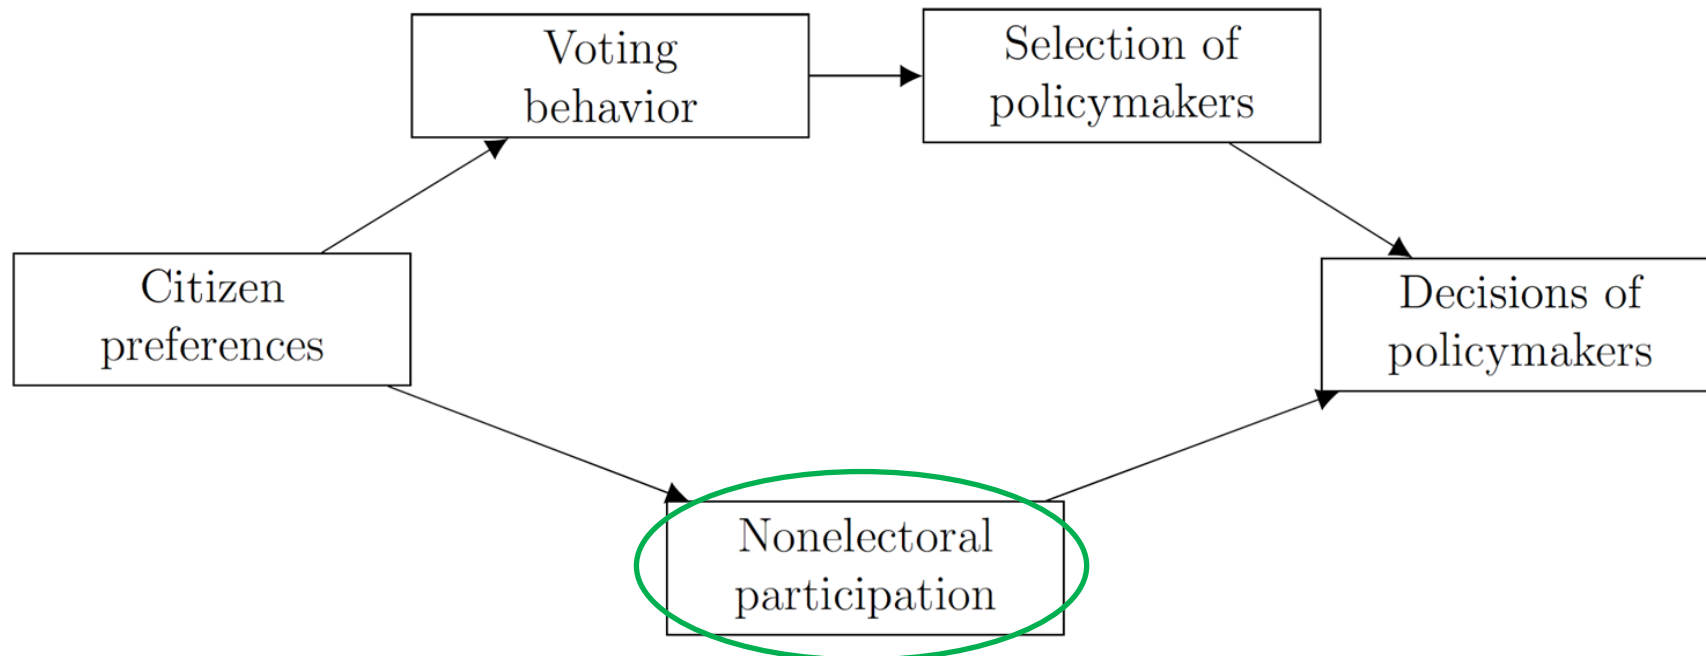

Figure 6: Association Between Different Forms of Political Participation and Opinion-Policy Congruence.

Research Questions & Answers

- (1) **Participation-Policy Connection:** Is opinion-policy congruence higher for the politically active? Yes for demonstrators, not for voters
- (2) **Alternate Causal Explanations:** Can alternative explanations account for a relationship between participation and opinion-policy congruence? Partially

Figure 1: Electoral and nonelectoral channels of influence.

Gov. Ron DeSantis: COVID-related mask mandates will never return to Florida

By Dan Heston | Published: September 7, 2022 3:10pm EDT | Florida | KDKA Orlando |

DeSantis says 'no' to mask mandates in Florida

Gov. Ron DeSantis is saying "no" to any potential mask mandates in Florida as the state reported a new all-time high in COVID cases.

JACKSONVILLE, Fla. - Florida Gov. Ron DeSantis said COVID-related mask mandates will never return to the state amid a rise in cases across the U.S.

Trending

Research Questions

- (1) How are politicians evaluated when they align with **individuals**' views on key policy issues?
- (2) How does the presence of **mobilized groups** contesting these issues influence citizens' evaluations of politicians?

Theory and Hypotheses

H1: Individual-elite congruence

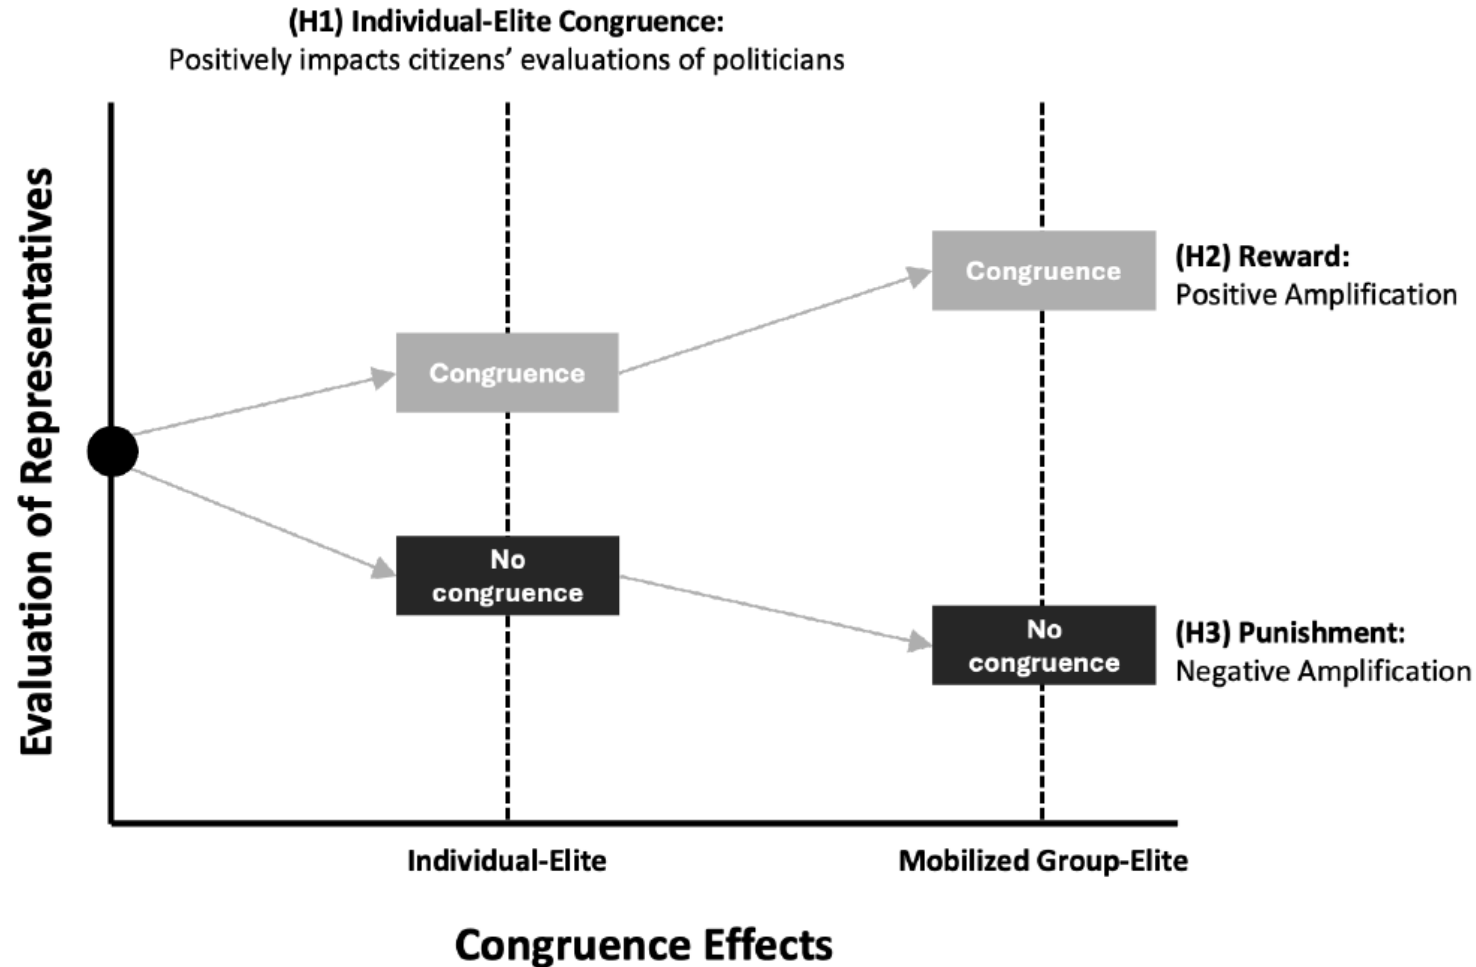

Congruence as alignment between citizen's preferences and public policy (Persson and Sundell 2024).

One-to-one distance between the position of the citizen and the politician (Golder and Stramski 2009).

H1: Individual-elite congruence will positively influence citizens' evaluations of politicians.

Theory and Hypotheses

H2 & H3: Elite-mobilized group congruence

Theory: As social movements target both power holders and the broader public to build support (Bernard, Bischof, and Wouters 2020) the alignment between political elites and mobilized groups could enhance political support or lead to electoral consequences. ³³

Theory and Hypotheses

H4: Policy Saliency

H4: Policy Saliency

The saliency of the policy issue (abortion) to the individual respondent will moderate the effect of citizen-elite congruence on respondents' evaluation of candidates

Research Design

Context: Argentinian Green Tide

Survey overview:

1. Sociodemographic Module
2. Political Module (e.g., party id, vote 2023, policy saliency, 3 main country problems)
3. Policy Positions Module (e.g., abortion + other current policy issues)
4. Experimental Module
 - Two experimental vignettes of social mobilization (one pro-, one anti-abortion); pilot for evaluating a memory stimulation or a imaginary scenario vignette.
 - Conjoint experiment: two different candidates, randomization of attributes and policy positions (congruent/incongruent policy position on abortion)

Experimental Vignettes v1 - Memory Stimulation

Experimental Vignette 1a:

During 2020, in the context of the discussion on the abortion law, there were massive marches called by different organizations, such as the Network for Access to Safe Abortion in Argentina, in favor of the Law on the Voluntary Interruption of Pregnancy

Aborto legal

El color verde inunda Argentina para reivindicar el aborto legal en 2020

- Miles de argentinos se han reunido para celebrar que en un 19 de febrero se produjo el primer gran pañuelazo verde
- La concentración ha ido dirigida al Gobierno y al Congreso, a los que animan a aprobar el proyecto de despenalización

20.02.2020 10:10 horas

Experimental Vignette 1b:

Experimental Vignette 2: During 2020, in the context of the discussion on the abortion law, there were massive marches called by different organizations such as Marcha Por La Vida and other pro-life groups against the Law on Voluntary Interruption of Pregnancy.

Se manifiestan este sábado en rechazo al proyecto de legalización que presentó el Presidente. En Buenos Aires van del Obelisco al Congreso.

Experimental Vignettes v2 - Imaginary Scenario

Informed by Harris & Lin-Greenberg (In press), JEPS “Is a Picture Worth 280 Characters?”

Imagine the following scenario:

In your city, recent discussions about abortion rights have led to significant public demonstrations. A group of people has gathered to express their stance on the abortion law. The protesters are [SUPPORT OR OPPOSE ABORTION]. They are wearing [COLOR] and have gathered at the main square. The demonstration is focused on [MESSAGE].

Support for abortion

- Supportive of keeping abortion legal, or
- Opposed to abortion, advocating for a repeal of the legalization

Color

- Green, symbolizing support for abortion rights, or
- Light blue, representing opposition to abortion

Message

- Demanding the government uphold the 2020 law on abortion rights, or
- Calling on legislators to reverse the 2020 abortion law and make abortion illegal again

Conjoint Experiment - After Vignette v1 or v2

Table 1: List of Candidate Attributes

Attribute	Possible Values
Age	50*, 35, 67
Gender	Female, Male*
Party Affiliation	LLA, UxP*, JxC, HxNP, FIT-U
Policy Position Abortion	1-5 Agreement Scale
Policy Position [Ad-hoc Policy]	1-5 Agreement Scale

Note: Attribute selection based on Bansak et al. (2021). Baseline categories are marked with *. For the abortion policy positions, the baseline will be the same position as the respondent. Party affiliation acronyms correspond to LLA (La Libertad Avanza), UxP (Unión por la Patria), JxC (Juntos por el Cambio), HxNP (Hacemos por Nuestro País), and FIT-U (Frente de Izquierda y de Trabajadores - Unidad).

Experimental Design v3 - Imaginary Scenario + Conjoint

Imagine the following scenario:

Imagine that in your city, there's a large protest happening on abortion rights. The protesters are **[supportive of abortion rights or opposed to abortion rights]**, wearing **[green/light blue]** and calling on the government to **[uphold the 2020 law on abortion rights or reverse the 2020 abortion law]**."

Amid these protests, two candidates for office have each made their positions on abortion known, reflecting different approaches and perspectives on this issue.

Consider Candidate A, a **[50-year-old male]** from the **[UxP party]**, who has expressed a position on abortion that **[aligns with or differs from]** the stance of the mobilized group. His position on abortion is **[mention position]**, signaling his support for legal abortion. In addition, Candidate A has a strong stance on another key issue, **[mention his stance on other policy position]**.

Now, compare him with Candidate B, a **[35-year-old female]** from the **[LLA party]**, whose position on abortion is **[2 - Disagree]**. This stance places her in opposition to the mobilized group's position and reflects a more conservative view on the issue. Her stance on **[mention her stance on other policy position]**.

Topics for Input and Discussion

- Registered Report experience and advice is welcome - especially re: conducting a pilot survey
- Revision dilemmas for experimental design:
 - (1) “Memory stimulation” versus “imaginary scenario”?
 - (2) Vignettes separate from or integrated with conjoint?
- Design revision consideration: add an additional policy issue to make the **abortion** focus less obvious, e.g., protests about **university funding**

#3: Invitations!
